Biohabitats Names Jennifer Missett Chesapeake/Delaware Bays Bioregion Team Leader

Baltimore, MD—June 19, 2017—Ecological consulting firm Biohabitats, Inc. today announced the promotion of Senior Water Resources Engineer Jennifer Missett to Chesapeake/Delaware Bays Bioregion Team Leader. In this role, Missett will guide the firm's ecological restoration, conservation planning, and regenerative design work within the watersheds of the Chesapeake and Delaware Bays.

Missett, who joined Biohabitats in 2007, has over two decades of experience in water resources policy development, planning, and design. In that time, she has led the successful completion of more than 120 projects related to watershed health, stormwater management, Water Quality Act compliance, and natural resource conservation. Before joining Biohabitats, Missett was program director at the Center for Watershed Protection.

"Jennifer has helped communities throughout the country to apply green infrastructure solutions and water resource restoration measures to achieve their goals," said Biohabitats president, Keith Bowers. "Her attention to detail, communication skills, and expertise in time and budget management have also helped ensure that our clients' needs for clean water and healthy ecosystems are met efficiently."

Biohabitats is a conservation planning, ecological restoration, and regenerative design firm. Working throughout North America, Biohabitats operates out of seven bioregion offices.
